DESCRIPTION

The Datamasters Radiological Technologists mailing lists allows you to reach these healthcare professionals through direct mail at their home address.

Radiology technicians and technologists use imaging equipment such as x-rays, computed tomography (CT scans), and Magnetic Resonance Imaging (MRI) to detect disease or abnormalities in the body. They use lead shields to protect patients from unnecessary exposure to radiation. Technologists (or radiographers) will maintain and clean equipment, prepare the patients for the X-ray or MRI, and take the necessary images so the radiologist can interpret the results for diagnosis and treatment. Radiological technologists would use lead shields, hospital gowns, x-ray film, software, x-ray developing equipment, pillows, blankets, and disposable gloves and masks in their duties.

Purchasers of the radiological technologists mailing list would include continuing education providers, medical periodical publishers, footwear providers, and medical apparel providers.
